

1) Trends in terms of Flynn's taxonomy (SISD, SIMD, MIMD, MIND)

1. Cluster (MIMD) → because it's a hybrid architecture (multiple CPUs, GPUs...)
2. More communication between nodes, more parallelism

2) Multi-interconnected network

1. Topology → DragonFly + fat tree...
2. Connection type → InfiniBand (protocol)
3. Band width → 200 gbit / link
